Sudharma BG

Senior Full Stack & AI Engineer · Bengaluru, India
+91 97385 25185 · bgsudharma1998@gmail.com · linkedin.com/in/sudharmabg · github.com/Sudharmabg · sudharmabg.vercel.app

Summary

Full stack and AI engineer with 6 years of experience in Java/Spring Boot and React. At Hatchlab, took an AI EdTech platform from PoC to v1 while building and leading a team of 10. Ships RAG pipelines at 95% accuracy, Redis-backed APIs 30–40% faster, and created the open-source tool **Causeline**.

Projects

Causeline — *Open-Source Debugging Tool*

causeline.dev · GitHub · npm

- Traces one user action from the React click through Spring controllers, services, and transactions to every SQL statement on one timeline (React, Next.js, Spring Boot, JDBC/R2DBC).
- Flags bottlenecks and long transactions, replays requests, and compares runs span by span; runs inside the app with no account or agent required.

Spring AI Firewall — *Spring Boot Starter*

GitHub

- One-dependency API firewall that runs before Spring Security: Redis sliding-window rate limiting across instances, bot detection, and a risk score that allows, logs, or blocks each request.
- Features per-path YAML rules, audit logging, and optional OpenAI anomaly detection (Java, Redis); prompt-injection protection in development.

PayFlow — *UPI-Style Payments Backend*

GitHub

- ACID wallet transfers that lock sender and receiver rows, keeping balances consistent under concurrent payments.
- Features UPI ID lookup, statements, and analytics behind a layered REST API (Java 21, Spring Boot 3.3, JPA).

Experience

Hatchlab Innovations — *Senior Software Consultant*

Jan 2026 – Present | Remote

- Led the AI EdTech platform development end-to-end (PoC → MVP → v1); built, led, and mentored a team of 10 engineers.
- Architected Spring Boot 3 microservices with RAG pipelines achieving 95% feedback accuracy.

- Designed a personalization engine roadmap that raised engagement by 25–35% in testing.
- Built React and Tailwind CSS dashboards delivering sub-2-second page loads on MySQL tracking schemas.
- Launched digital platforms including TIG World Schools, TIG Man City, and Hatchlab websites; TIGWS reached 27.4K search impressions within 3 months.

Altisource — *Software Engineer*

Dec 2020 – Nov 2025 | Bengaluru, India

- Built distributed systems for high-volume real estate auctions on Hubzu.com, raising system throughput by 20%.
- Optimized the bidding interface using React and Tailwind CSS, lifting user conversion by 7%.
- Implemented DocuSign workflows and Spring Security hardening for SOC 2 compliance.
- Reduced SQL query execution times by 35% through performance tuning and index optimization.
- Cut development cycles by 50% by integrating generative AI prototyping workflows with GitHub Copilot and GPT models.

Skills

- **Backend:** Java, Spring Boot, Spring Cloud, Spring Security, Hibernate/JPA, REST APIs, Microservices, Apache Kafka, RabbitMQ
- **AI & LLM:** RAG pipelines, LLM integration (OpenAI, Anthropic), prompt engineering, recommendation systems
- **Frontend:** React, Next.js, Tailwind CSS, Redux Toolkit, Context API
- **Databases:** MySQL, PostgreSQL, Redis, Supabase, query tuning, schema design
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS), Cloudflare, Docker, GitHub Actions, Jenkins, Maven, Git

Education

- **B.E. in Computer Science** — APS College of Engineering *(2016 – 2020)* | **CGPA:** 7.6 / 10

Personal Information

- **Languages:** English, Kannada, Hindi
- **Interests:** Football, Cricket, Reflective Writing
